

Personal Support Workers working with CTGHG

Work in the client's home to support an individual client and/or family. As part of the inter-professional team you will provide the personal care that keeps the client living comfortably at home including: grooming, feeding, toileting, bathing, lifting and moving, bedside care, and companionship. Our PSW's also provide assistance with activities of daily living such as meal planning and preparation; light housekeeping; grocery shopping, laundry, and errands.

As a member of our inter-professional team you will sometimes be required to provide personal care in a specific manner recommended by a regulated health professional to support the client's independent living goals such as shopping or accessing a medical appointment. You may participate in functions/tasks that have been taught by and transferred to them, by another member of the health care team such as a Nurse or Physiotherapist. As the PSW you can assist clients with their medications, oxygen, nebulizers, dry dressings, catheters, bowel routines and exercise routines with direction and supervision.

Our PSW's play an essential role in caregiver relief that may include infants, children or adults. You may be called upon to assist with feedings, bathing and supervision of play and activities according to instructions from the parents/guardians or provide supervision and care of a client to allow the caregiver time away.
